## The Plexipave® system. The standard by which all others are judged.

World wide indoors and out, the Plexipave® system has proved itself the leader in tennis court surfacing systems. The 100% acrylic Plexipave® system is a combination of texture coats and finish coats, that provides a weather resistant surface for indoor or outdoor use.

Coops Complex - Queensland

## THE ADVANTAGE

### 1. Choice of Champions

Plexipave is championship quality court surfacing that's tough and durable yet easy and economical to maintain. Plexipave stays smooth and uniform—keeps its good looks for years. Easily cleaned with water and mild detergents, Plexipave does not soften or disintegrate as do some ordinary coatings and emulsions. Made from pure inert color pigments, Plexipave's in-depth color surface stays rich and attractive for years and years. Plexipave really gives you more time to enjoy the game—needs no sweeping, bagging or rolling.

Traction is superb—there's no slipping and sliding, and the predictability of bounces brings out the best in any player.

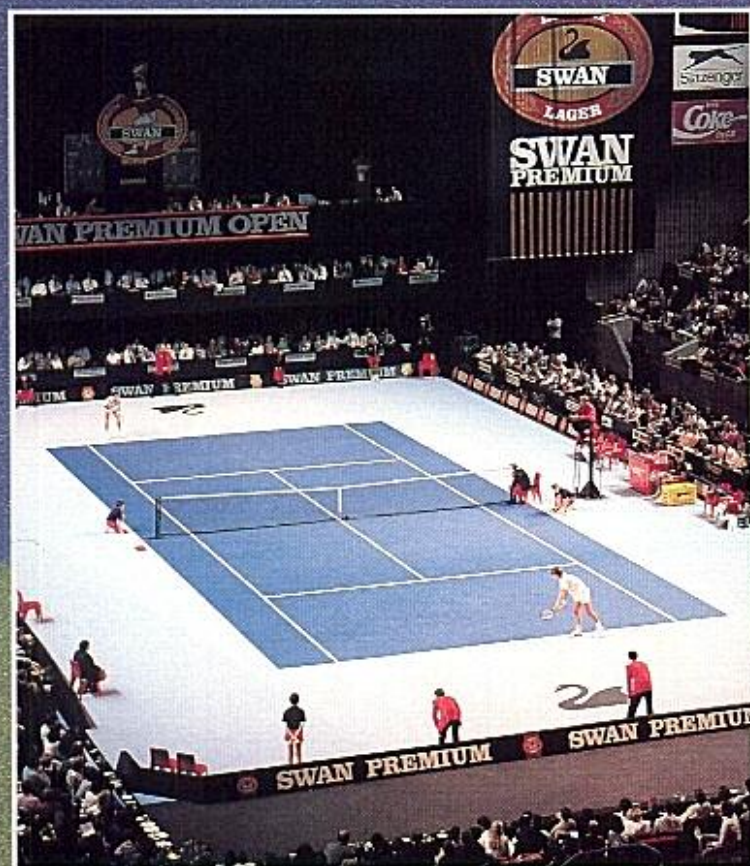

### 2. Minimal Maintenance

Top tennis demands top quality playing surfaces. Plexipave has earned the acclaim of great players and experienced court builders alike. It's a pleasure to play on Plexipave. Maintaining constant speed, with true reaction to bounce and spin, over its life-time. Plexipave does not become slick or shiny after hard use.

## THE ADVANTAGE

### Netball Plexipave

Innovation has earned Plexipave products a place in tennis history. The first 100% acrylic surfacing system and the first all-acrylic cushion surface were introduced to the world in 1953 and 1967 respectively.

We are proud to announce the development of 'Netball Plexipave' designed to suit Netballers' special needs of superior grip and traction, but still retaining the durable qualities of the Plexipave® system.

### Multi Purpose Surface

Plexipave is an ideal surface for schools, councils and clubs, who require a durable economical multi-usage facility for playing tennis, volleyball, netball, basketball, and other ball sports.

### Plexipave And Plexicushion Are Applied Only By Our Skilled Applicators

Landscape architects and site planners prefer Plexipave synthetic surfaces. They choose from nine rich colors to complement or contrast with architecture and landscape surrounds. Plexipave is becoming more and more popular for multi-purpose applications too, providing colorful attractive surfacing which is also tough and durable.

Our selected skilled applicators are kept closely informed on product development so that at all times they have access to the best materials and knowledge, assuring you of getting the right product for the right job.

Multi-Usage Outdoor - Victoria

Multi-Usage Indoors - Victoria

# THE ADVANTAGE

## What is Plexipave?

Plexipave is an acrylic multiple coating color system available in several colors. Plexipave is applied over asphalt or concrete and protects the surface of the base against material breakdown and deterioration.

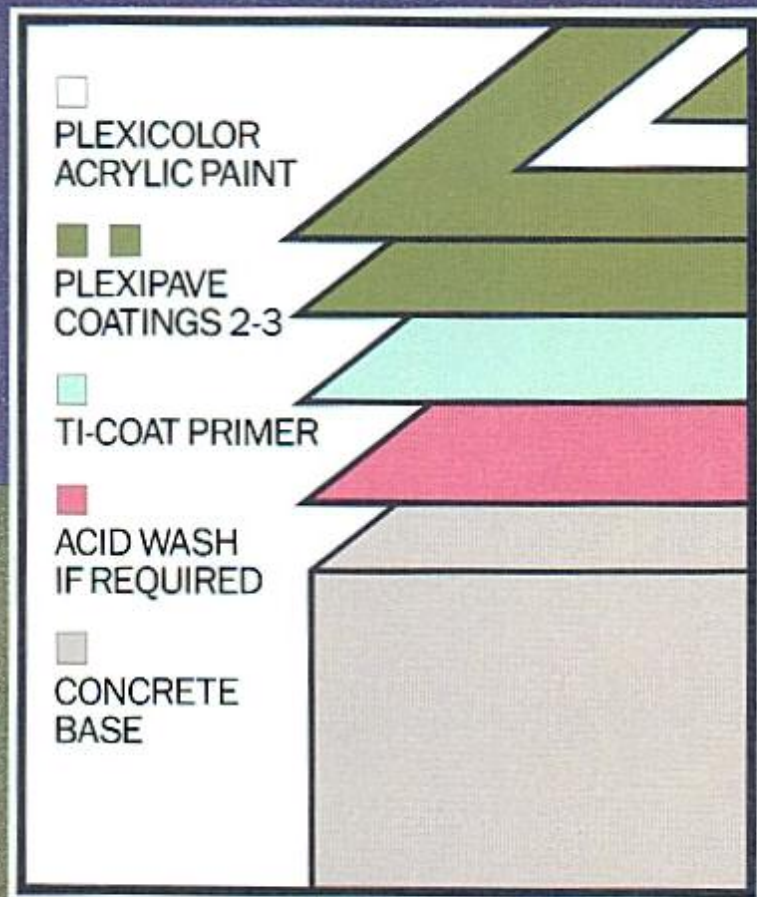

Over an asphalt base, an acrylic resurfacer is applied to fill any marginal porosity in the surface of the asphalt, then two or three

coats of Plexipave is applied to provide a uniform wearing surface.

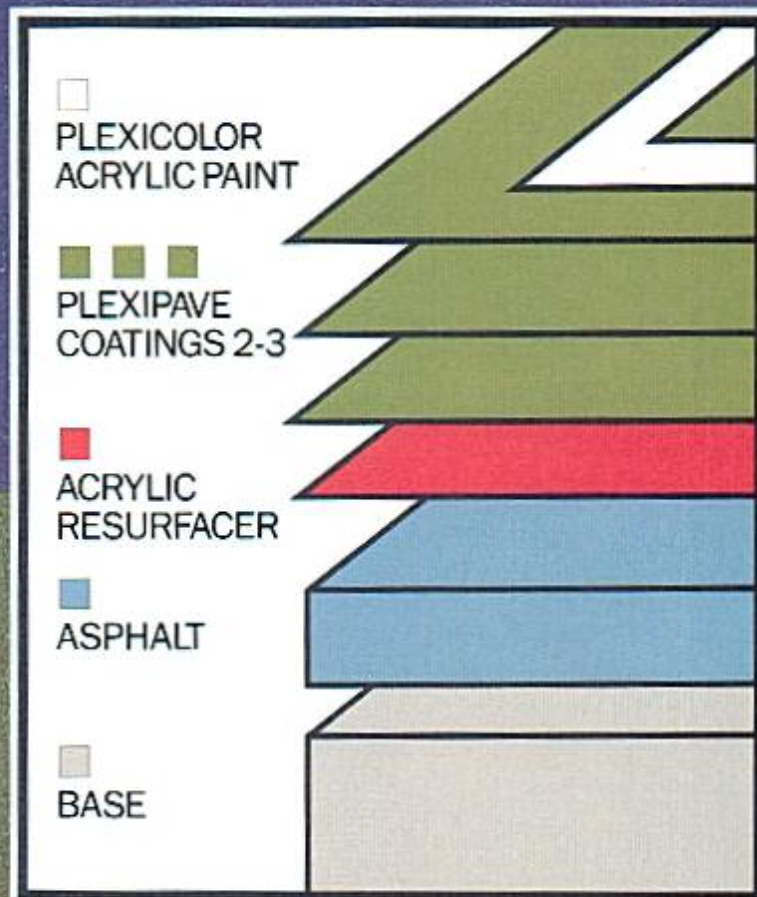

On concrete, the surface is acid washed if necessary and allowed to thoroughly dry. A prime coating of 'Plexipave Ti-Coat' is applied, then follows 2 to 3 coats of the Plexipave/Plexichrome surfacing system.

The final coats of either system may be fortified Plexipave or Plexichrome to meet individual requirements regarding speed of play.

Finally non-glare, non-chalking lines of Plexicolor acrylic line paint is applied as a final touch.

Plexipave® System over Concrete Base

Plexipave® System over Asphalt Base

## The Only Complete Line Of Recreational Surfacing Products

### Acrylic Resurfacer

This improved acrylic primer-filler coat has many advantages over the old-fashioned asphalt emulsion products. While Acrylic Resurfacer is much easier to handle than asphalt emulsion products and is faster drying, it still provides the filling and binding qualities required of an undercoat, and it offers superior compatibility with the 100% acrylic Plexipave® surface finish.

### Court Patch Binder

New or existing asphalt and concrete surfaces can be easily patched and levelled with this high-strength acrylic latex bonding liquid. Patches of this material can measure as much as 20mm in depth and still not shrink or crack as they dry. Additionally, Court Patch Binder is fast drying and

### Concrete Preparer

Just as its name says, this formulation prepares previously uncoated Portland Cement Concrete for coating with the Plexipave® Surfacing System. Essentially, Concrete Preparer is a chemically modified acid etchant for concrete pre-treatment which requires no after wash.

### Ti-Coat Concrete Primer

This clear two-component epoxy primer is a concrete penetrant which is an excellent bonding agent for use on new or uncoated concrete prior to the application of the Plexipave® Surfacing System.

### Plexicolor Line Paint

A pure acrylic non-glare marking paint, it is used on tennis courts, athletic running tracks and asphalt areas. It is supplied in both textured and non-textured form in a variety of colors.

### Crack Filler

Minor cracks and slight depressions in asphalt or concrete surfaces can be repaired

to the sides of cracks, allowing expansion and contraction as temperatures change.

### Plexichrome

Plexichrome is our original acrylic color finish coat. It is ideal for recoating faded courts when the surface is still in good condition. It contains no filler and can be used alone, or with fine aggregate sand fillers or in conjunction with Plexipave® Color Base.

### Plexipave® Color Base.

Acrylic texture coat is mixed with Plexichrome to create full color-in-depth surfacing over asphalt or concrete.

# THE ADVANTAGE

The Claremont Resort Hotel & Tennis Club, Oakland, California

Silverado Country Club - Napa - California

The Tennis Garden - Kapalua, Maui, Hawaii

Renouf Complex Wellington - New Zealand

Silverado Country Club - Napa - California

Davis Cup Training Centre University of Portland, Oregon

## THE ADVANTAGE

### All Seasons Surface

Plexipave dries quickly after rain. Ideal anti-glare qualities increase visibility whilst court temperatures are lowered by 5°C-7°C. Plexipave breathes without losing its tenacious bond with asphalt or concrete. Plexipave is the ideal system for night tennis too. Visibility and all-round playing conditions under good lighting are ideal. Plexipave really lives up to its claim that you'll get more pleasure.

### An Economically Renewable Surface

After withstanding years of hard play the Plexipave surface on a properly constructed court can be easily renewed without costly removal, relaying or reconstruction work. The process of resurfacing with Plexipave using the normal pedestrian access brings brand new life with a choice of new colors to existing courts.

### Plexicushion.® You'll Know There Is A Difference

Serious tennis players know when they play on a court with Plexicushion.

Plexicushion is a more comfortable playing surface that enhances both team and individual performance. Plexicushion's shock absorbing qualities reduce a player's foot and leg fatigue. Unlike some other cushioning systems, it provides a firm, uniform surface, enabling players to play on the surface not in it. This prevents the subtle

fatigue caused by playing on a soft, spongy surface. Additionally, Plexicushion is available at an affordable price.

Technically, Plexicushion is a resilient sub-surface containing rubber and acrylic particles that is applied in multiple layers prior to the Plexipave® Surfacing System. Ball bounce and speed are not affected by Plexicushion. These features are still controlled by the Plexipave® Surfacing System.
